

Org-Ops ERP — Microsoft Single Sign-On Setup Guide

Origin Tech Group · Org-Ops Cloud ERP

Purpose: Let staff sign in to Org-Ops with their existing Origin Tech Group Microsoft 365 account — no new usernames or passwords.

Audience: Microsoft 365 / Entra ID administrator · Org-Ops app owner · System Administrators.

1. What this gives us

- **One login for staff.** People sign in with the same Microsoft account they use for Outlook / Teams.
- **Company-only.** Only accounts inside Origin Tech Group's Microsoft tenant can sign in. Personal or outside accounts are rejected automatically.
- **Signing in is not access.** A first-time sign-in lets a person in, but they see an **empty dashboard with no suites** until a **System Administrator grants access**. Access is always controlled inside Org-Ops, never automatic.

2. Who does what

#	Role	Who	Responsibility
A	Microsoft 365 / Entra ID Administrator	Origin Tech Group IT	Register the app in Entra and hand back 3 values (Section 4). One-time, ~10 min.
B	Org-Ops App Owner (with developer)	You + dev	Enter those 3 values into the app backend (Supabase) and finish wiring (Section 5).
C	System Administrator (inside Org-Ops)	Designated manager	Grant suite access to each staff member after first sign-in (Section 6). Ongoing.

Sections 3–4 are written so you can forward them directly to your IT / Entra administrator.

3. Information the IT administrator will need

Field	Value
App name (suggested)	Org-Ops ERP
Redirect URI (callback URL)	https://dxekronjsvnmnbamlqh.supabase.co/auth/v1/callback
Platform type	Web
Account type	Single tenant (this organization only)

4. ♦ Task for the Microsoft / Entra ID administrator

Forward this section to whoever administers Origin Tech Group's Microsoft 365 / Entra ID.

Please register an application so Org-Ops ERP can use Microsoft sign-in:

1. Go to **portal.azure.com** → **Microsoft Entra ID** → **App registrations** → **New registration**.
2. **Name:** Org-Ops ERP
3. **Supported account types:** "Accounts in this organizational directory only (Single tenant)".

4. **Redirect URI:** platform **Web**, paste `https://dxekronjsvnmnbantlqh.supabase.co/auth/v1/callback`
5. Click **Register**.
6. On the **Overview** page, copy the **Application (client) ID** and **Directory (tenant) ID**.
7. **Certificates & secrets** → **New client secret** → set expiry (e.g. 24 months) → **Add** → copy the secret **Value** immediately (shown once — copy the *Value*, not the *Secret ID*).
8. If prompted under **API permissions**, the default `User.Read` / `openid` is enough; add `email` and `profile` if missing, then **Grant admin consent**.

Please send back these three values securely (password manager or sealed message — not plain email):

Value to send back	Where it was copied
Application (client) ID	Overview page
Directory (tenant) ID	Overview page
Client secret Value	Certificates & secrets

⚠ The client secret expires on the date chosen in step 7. Set a calendar reminder ~2 weeks before to generate a new one, or sign-in will stop working that day.

5. ♦ Task for the app owner / developer

Once IT returns the three values, finish the wiring (no code changes needed):

1. **Database trigger** (one-time): in Supabase → **SQL Editor**, run `supabase/sso.sql`.
2. **Enable provider:** Supabase → **Authentication** → **Providers** → **Azure** → **Enable**:
 - **Client ID** = Application (client) ID
 - **Secret** = the client secret Value
 - **Azure Tenant URL** = `https://login.microsoftonline.com/<Directory (tenant) ID>` — setting this (not blank) restricts sign-in to Origin Tech Group only.
 - Save
3. **URLs:** Supabase → **Authentication** → **URL Configuration** → Site URL `https://originerp-client-ni2e.vercel.app`; add Redirect URLs for that URL and `http://localhost:5173`.
4. **Allow sign-ups:** Supabase → **Authentication** → **Sign In / Providers** → "Allow new users to sign up" **ON**. (Safe: non-Microsoft self-signups are auto-disabled by the app.)

The "Sign in with Microsoft" button on the login page will then work.

6. How staff sign in (after setup)

1. Go to `https://originerp-client-ni2e.vercel.app` and click **Sign in with Microsoft**.
2. Authenticate with their Origin Tech Group Microsoft account (and MFA if required).
3. They reach the Org-Ops home screen — **with no suite access at first** (every tile shows "No access").
4. A **System Administrator** opens **Admin Center** → **Users** → **Manage access** and ticks the suites they should have.
5. The staff member refreshes and sees only the granted suites.

7. Access & governance

- **Authentication** (who you are) is handled by Microsoft.

- **Authorisation** (what you can open) is handled inside Org-Ops by a System Administrator.
- Removing someone's Microsoft account (offboarding) automatically blocks Org-Ops sign-in.
- A System Administrator can also disable an account inside Org-Ops at any time.

8. Security notes

- The **client secret** is sensitive — share only through a secure channel; it lives only in server-side config, never in the browser.
- Sign-in is locked to the **single Origin Tech Group tenant** — no outside accounts.
- The existing **email/password login still works** for the System Administrator and service accounts.

9. Combined checklist

IT / Entra admin

☐	App registered (single tenant), redirect URI added
☐	Application (client) ID, Directory (tenant) ID, Client secret Value sent back securely
☐	Secret expiry noted on a calendar

App owner / developer

☐	<code>supabase/sso.sql</code> run
☐	Azure provider enabled in Supabase with the 3 values + tenant URL
☐	Site URL & redirect URLs set
☐	"Allow new users to sign up" ON
☐	Tested: Microsoft sign-in lands on empty dashboard

System Administrator (ongoing)

☐	Grant suite access to each new staff member after first sign-in
--------------------------	---

Reference — project values

Item	Value
App URL	<code>https://originerp-client-ni2e.vercel.app</code>
Supabase callback / redirect URI	<code>https://dxekronjsvnmnbmlqh.supabase.co/auth/v1/callback</code>
Azure Tenant URL format	<code>https://login.microsoftonline.com/<tenant-id></code>
Identity provider	Microsoft Entra ID (Azure AD) · OAuth 2.0 / OpenID Connect
